CONVIVIAL

for Civic

Personalisation

Help your users achieve their goals faster with improved user flows and relevant, promoted tasks tailored to their context and journey.

Extended components

Power up your site with more components to improve content design and structure. Try out Timelines, Interactive charts, Geocharts, Gallery, Lightbox among others.

Decision trees

Guide your user through complex legislation by creating simplified set-by-step flows of conditions. You need only use this Drupal-native solution to present answers relevant to their journey.

Useful content types

You'll be ready to build your site with content types we found commonly used on government sites: Listing, audience, topic, page, article, article type, resource, event, and FOI.

Content as a Service

Serve content from Drupal onto other platforms using JSON API. Site builders can configure this functionality using 'no-code' tools.
